EDUCATION

University of California, Berkeley

Expected May 2029

B.A. in Data Science | GPA: 3.89/4.0 | Berkeley, CA

Relevant Coursework: Data Structures (CS 61B), Discrete Mathematics and Probability Theory (CS 70), Structure and Interpretation of Computer Programs (CS 61A), Foundations of Data Science (Data C8)

EXPERIENCE

MiraclePlus - Industry Research & Mapping Intern

May 2026 - Aug 2026

Beijing, China

- Built an AI-assisted research workflow using Python, n8n, and LLM APIs to research and organize 1,500 candidate profiles across 12 industry domains.
- Designed a structured pipeline for contact deduplication, candidate scoring, human approval, and CRM status tracking.
- Generated 300+ personalized outreach emails with human-review checkpoints to reduce duplicate, unsupported, or low-relevance communication.

Chinese Academy of Sciences - Software Developer

Jun 2024 - Jul 2025

Beijing, China

- Designed an accessibility-focused calculator with streamlined input logic for students with visual impairments.
- Conducted user testing with students at Beijing School for the Blind and iterated on interface and interaction design based on feedback.

London Stock Exchange Group - Data Analyst Intern

Apr 2024 - Aug 2024

Beijing, China

- Analyzed customer and transaction datasets using Python and Azure SQL to support credit-risk and customer-risk workflows.
- Built reusable data-cleaning and transformation pipelines to standardize raw inputs and support downstream analysis.

SELECTED PROJECTS

Personal Finance Data Assistant

2026

Python, SQL, LLM APIs, Tool Calling, Financial Transaction Data

- Prototyped an LLM-based assistant for analyzing 120 days of transaction history, including recurring charges, spending categories, and cash-flow patterns.
- Designed a tool-calling architecture that retrieves relevant transaction subsets on demand instead of passing the full transaction history into every model request.

Personal Portfolio Website

2026

jingxuanlyu.com | Next.js, TypeScript, Cloudflare Pages, Git

- Built and deployed a responsive portfolio website using Next.js, TypeScript, and Cloudflare Pages.
- Implemented reusable components and responsive layouts, and configured routing, custom-domain deployment, and Git-based version control.

Fraud Transaction Detection

2025

Python, pandas, scikit-learn, TensorFlow

- Built and compared logistic regression, random forest, and CNN models for fraud detection on imbalanced transaction data.
- Performed preprocessing, feature engineering, and model evaluation using precision, recall, F1 score, and confusion matrices.
- Analyzed model errors to compare robustness across model classes.

TECHNICAL SKILLS

Languages: Python, Java, SQL, TypeScript, JavaScript
Data & ML: pandas, NumPy, scikit-learn, TensorFlow, feature engineering, model evaluation
Web & Automation: Next.js, n8n, LLM APIs, tool calling
Tools: Git, Jupyter Notebook, Azure SQL, Cloudflare Pages

AWARDS

USACO Gold Division | International Economics Olympiad, Individual Bronze Medal | SDG Innovation Hackathon China Finals, 1st Place
