EDUCATION

University of California, Berkeley Expected May 2029
B.A. in Data Science | GPA: 3.89/4.0

Coursework: Data Structures (CS 61B), Discrete Mathematics and Probability Theory (CS 70), Structure and Interpretation of Computer Programs (CS 61A), Foundations of Data Science (Data C8)

EXPERIENCE

Captain.ai - Software Engineering Intern Oct 2026 - Present
Startup
- Develop iOS application features and an email system, supporting automated email workflows.
- Build workflow automation connecting application functionality with email operations.

MiraclePlus - Industry Research & Mapping Intern May 2026 - Aug 2026
Beijing, China
- Built an AI-assisted research workflow with Python, n8n, and LLM APIs to organize 1,500 candidate profiles across 12 industries.
- Designed a structured pipeline for contact deduplication, candidate scoring, human approval, and CRM status tracking.
- Generated 300+ personalized outreach drafts with human-review checkpoints.

Chinese Academy of Sciences - Software Developer Jun 2024 - Jul 2025
Beijing, China
- Designed an accessibility-focused calculator with streamlined input logic for visually impaired students.
- Conducted user testing at Beijing School for the Blind and iterated on interface and interaction design based on feedback.

London Stock Exchange Group - Data Analyst Intern Apr 2024 - Aug 2024
Beijing, China
- Analyzed customer and transaction datasets with Python and Azure SQL to support credit-risk and customer-risk workflows.
- Built reusable data-cleaning and transformation pipelines to standardize raw inputs for downstream analysis.

RESEARCH

Robot Table Tennis - Embodied Intelligence Sep 2026 - Present
Collaborating with Dvij Kalaria, EECS PhD Student, UC Berkeley
- Develop a perception-to-control pipeline for robot table tennis, working on YOLO fine-tuning for ball detection, AprilTag-based calibration, and coordinate transformations into a shared reference frame.
- Develop stereo-vision estimates of ball position, velocity, and acceleration for integration with a policy-based striking controller.

Corporate Disclosures & Intraday Forecasting 2026
Research manuscript | Coauthor with Xueshi Bai
- Study whether corporate disclosures improve intraday forecasts using 479,540 stock-day observations, 493 historical CSI 300 constituents, and 435,374 announcements.
- Evaluate TCN ensembles with expanding-window validation and date-clustered inference: price-only out-of-fold AUC of 0.5482 versus 0.5223 for the baseline; disclosures show no robust incremental signal.

Fraud Transaction Detection 2025
Python, pandas, scikit-learn, TensorFlow
- Compared logistic regression, random forest, and CNN models on imbalanced fraud data using feature engineering, precision, recall, F1 score, and confusion matrices.

SELECTED PROJECT

Personal Portfolio Website 2026
Next.js, TypeScript, Cloudflare, Git
- Built and deployed a responsive portfolio with reusable components, custom routing, a custom domain, and Git-based version control.

TECHNICAL SKILLS

Languages: Python, Java, SQL, TypeScript, JavaScript
Data & ML: pandas, NumPy, scikit-learn, TensorFlow, YOLO, stereo vision, model evaluation
Software & Tools: Next.js, n8n, LLM APIs, tool calling, Git, Jupyter Notebook, Azure SQL

AWARDS

USACO Gold Division | International Economics Olympiad, Individual Bronze Medal | SDG Innovation Hackathon China Finals, 1st Place
